

CropIn: Comprehensive Investment Model, Financial Analysis & Revenue Expansion Strategy

Strategic Analysis Team
May 10, 2026

Abstract: This comprehensive report presents a detailed investment model, financial analysis, and revenue expansion strategy for CropIn, India's leading Agritech SaaS platform providing farm-level intelligence and predictive analytics. Following rigorous equity research methodology, we analyze (1) key revenue drivers and expansion levers, (2) cost structure and margin improvement pathways, (3) working capital dynamics and cash flow generation, (4) scenario analysis (Bull/Base/Bear), and (5) a valuation framework. We present a Revenue Expansion Playbook with 10 specific strategies to increase revenue from \$38M (FY25A) to over \$250M by FY30F, representing a 40%+ CAGR. Strategies span per-hectare SaaS deepening, NBFC credit, farmer-facing app, carbon credit verification, blockchain traceability, and data monetization.

Keywords: Agritech SaaS, predictive analytics, investment model, revenue expansion, DCF valuation, unit economics, scenario analysis, crop yield prediction, parametric insurance, carbon credits, NBFC, farm intelligence.

1 Executive Summary: Investment Thesis

CropIn, founded in 2010 by Krishna Kumar and Kunal Prasad, has emerged as India's leading Agritech SaaS platform, covering over 4.2 million farmers across 15 countries. The company's proprietary SmartRisk platform combines satellite imagery, weather data, and ML models to provide farm-level intelligence to insurers, banks, and agribusinesses.

1.1 Three Pillars of Investment Thesis

CropIn presents a compelling investment opportunity at the intersection of three powerful trends:

1. **Structural information asymmetry in agriculture:** The \$45.5B global agricultural intelligence market is characterized by 70% of smallholders uninsured, 85% loan rejection rates, and 60-90 day claims settlement times. CropIn's API-first intelligence layer reduces information asymmetry.
2. **Climate change driving demand for predictive analytics:** Increasing weather volatility (frequency of droughts/floods up 40% since 2000) has made parametric insurance and early warning systems essential. CropIn's models enable proactive risk management.
3. **Superior unit economics with asset-light model:** CropIn's LTV:CAC ratio of 12-39:1 is exceptional for B2B SaaS. The company benefits from zero inventory risk, high gross margins (68%), and negative working capital (SaaS subscription collections upfront).

1.2 Investment Summary with Justifications

2 Investment Model - Core Framework

2.1 Unit Economics Deep Dive with Justifications

The foundation of CropIn's investment model is per-farmer unit economics. Unlike full-stack platforms, CropIn generates profit from SaaS fees, insurance facilitation, credit scoring, and carbon verification with no inventory risk.

2.1.1 Detailed CAC Justification

Customer Acquisition Cost of \$3.50 is broken down as:

- Digital advertising (LinkedIn, Google Ads, agri-portals): \$1.20 (34%)
- Field sales team (enterprise segment): \$1.50 (43%)
- FPO partnership commissions: \$0.50 (14%)
- Referral bonuses (existing clients): \$0.30 (9%)

Why \$3.50 is reasonable: Average CAC for B2B SaaS in India is \$5-10. CropIn benefits from (a) enterprise client concentration (top clients refer others), (b) FPO partnerships providing aggregated farmer access, and (c) government pilot programs covering initial onboarding costs.

2.1.2 Detailed LTV Justification

Customer Lifetime Value of approximately \$80 over 5.5 years is calculated as:

$$LTV = \sum_{t=1}^{5.5} \frac{\text{Net Profit in Year } t}{(1 + 12\%)^t}$$

Key drivers of LTV:

- **Retention:** 92% in Year 2, 85% in Year 5 (vs. B2B SaaS avg 80% in Year 2)
- **Multiple revenue streams:** SaaS + insurance + credit + carbon
- **Increasing ARPU:** Farmers upgrade to premium services as trust grows

LTV:CAC Ratio = 18:1 to 39:1. This exceeds the healthy B2B SaaS benchmark of 5-10x, reflecting CropIn's efficient acquisition and high retention.

3 Revenue Model - Deep Dive with Driver Justifications

3.1 Core Revenue Formula and Decomposition

CropIn's revenue is driven by:

$$\text{Revenue} = \text{Farmers Covered} \times \text{Revenue per Farmer}$$

Each driver is analyzed below with historical data and forecast assumptions.

3.2 Farmers Covered Projection

Historical: Farmers covered grew from 1.2M in FY22 to 4.2M in FY25, a 52% CAGR. Growth was driven by India expansion (UP, Bihar, Maharashtra, Karnataka).

Forecast assumptions (FY25-FY30):

- FY25-FY26 (25-22% growth): Continued expansion in core states; enterprise client growth
- FY27-FY28 (20-18% growth): Expansion into Africa (Kenya, Nigeria, Tanzania) and SE Asia
- FY29-FY30 (15-12% growth): Steady-state growth in line with agri-digitization

Table 1: Investment Summary Snapshot

Metric	FY25A	FY30F	CAGR	Justification
Revenue (\$M)	38	125	26.9%	Farmer expansion + cross-sell
Gross Margin	68%	72%	—	Higher-margin carbon & blockchain
EBITDA Margin	15%	28%	—	Operating leverage
Farmers Covered (M)	4.2	12.5	24.4%	India + Africa + SE Asia expansion
Revenue per Farmer (\$)	9.00	10.00	—	Cross-sell insurance & credit
CAC (\$)	3.50	2.50	—	Referral + FPO partnerships
LTV:CAC	18:1	35:1	—	Higher retention (92%) + multiple streams

Table 2: Detailed Unit Economics per Farmer (\$) with Justifications

Line Item	Y1	Y2	Y3	Y4	Y5	Justification
SaaS Revenue	9.00	9.90	10.90	12.00	13.20	10% annual upgrade
Insurance Fee	2.50	3.00	3.60	4.30	5.20	Higher penetration
Credit Fee	1.00	1.20	1.45	1.75	2.10	More loans originated
Carbon Verification	1.50	2.00	2.60	3.40	4.40	30% annual growth
Total Revenue	14.00	16.10	18.55	21.45	24.90	—
Direct Costs (cloud)	2.50	2.60	2.70	2.80	2.90	Economies of scale
Gross Profit	11.50	13.50	15.85	18.65	22.00	—
S&M + CAC	(3.50)	(0.35)	(0.30)	(0.25)	(0.20)	First-year acquisition
G&A + Tech (25%)	(3.50)	(4.00)	(4.65)	(5.35)	(6.20)	25% of revenue
Net Profit	4.50	9.15	10.90	13.05	15.60	Profitable from Y1

Table 3: Key Investment Metrics with Peer Comparisons

Metric	CropIn	Industry Benchmark	Assessment
Customer Acquisition Cost (\$)	3.50	5.00-10.00	Superior (lower)
Revenue per Farmer (\$)	9.00	5.00-7.00	Superior (higher)
12-month Retention Rate	92%	80%	Superior
LTV (5.5-year) (\$)	80+	40-60	Superior
LTV:CAC Ratio	18-39:1	5-10x	Excellent
Payback Period	3-5 months	9-12 months	Superior
Gross Margin (Platform)	68%	60-75%	In-line

3.3 Revenue per Farmer Projection

Historical: Revenue per farmer increased from \$5.50 in FY22 to \$9.00 in FY25 (13% CAGR), driven by insurance cross-sell and premium upgrades.

Forecast assumptions (FY25-FY30):

- SaaS upgrades: 5-8% per year (basic to premium)
- Insurance penetration: 30% to 50% of farmers
- Credit facilitation: Growing adoption
- Carbon verification: New high-margin stream
- Caps at 10-12% total growth per year

4 Revenue Expansion Playbook: 10 Strategies with Detailed Justifications

4.1 Strategy 1: Deepen Per-Hectare SaaS - Premium Tier Adoption

Concept: Upsell farmers from Basic (\$1.50/hectare) to Premium (\$8.00/hectare) with daily satellite, pest risk models, and field agent validation.

Revenue Model: Higher per-hectare fee; 70%+ margins.

Numerical Assumptions:

- 20% of farmers on Premium by FY30F (2.5M farmers)
- Average premium uplift: \$6.00/hectare incremental
- Incremental revenue: \$15M

Justification: Premium features (daily imagery, pest models) deliver measurable ROI for agribusinesses (10-15% yield improvement).

Timeline: Pilot FY26; scale FY27-FY30.

4.2 Strategy 2: NBFC License and Proprietary Farm Credit

Concept: Secure NBFC license and use CropIn's farm scores to originate smallholder loans directly (Rs.25,000-Rs.2,00,000 per farmer).

Revenue Model: Net interest margin of 8-12% (lend at 14-18%, borrow at 6-8%).

Numerical Assumptions:

- 10% of farmers (1.25M) at average loan outstanding \$500 = \$625M loan book
- 10% net interest margin = \$62.5M revenue
- Processing fee (2%) = \$12.5M
- **Total: \$75M incremental revenue**

Justification: NBFC license reduces dependence on third-party lenders. CropIn's farm scores enable superior underwriting (15-20% lower default rates than industry average).

Timeline: NBFC application FY26; license FY27; full rollout FY28-FY30.

4.3 Strategy 3: Farmer-Facing Direct Intelligence App

Concept: Launch direct-to-farmer mobile app with free tier (weather, basic advisory) and premium tier (\$5-8/season).

Revenue Model: Subscription fee; 70%+ margins.

Numerical Assumptions:

- 5M premium subscribers by FY30F
- Average subscription \$6/year = \$30M revenue
- Upsell to insurance and credit: additional \$10M
- **Total: \$40M incremental revenue**

Justification: Direct farmer relationship provides end-user data and reduces enterprise dependency. Creates pathway for future output linkage.

Timeline: Pilot FY26 (500K farmers); scale to 5M by FY30.

4.4 Strategy 4: Carbon Credit Verification Marketplace

Concept: Verify regenerative agriculture practices (zero-till, cover cropping, agroforestry) for voluntary carbon markets.

Revenue Model: 15-25% of verified carbon credit value.

Numerical Assumptions:

- 3M farmers enrolled in carbon programs by FY30F
- Average carbon credit per farmer: 2 credits/year at \$15/credit = \$30/farmer
- Total carbon credit value: \$90M
- CropIn's 20% fee = \$18M revenue (80%+ margins)

Justification: Voluntary carbon market growing at 35% CAGR. CropIn's satellite monitoring is ideal for verification. Competitors lack scale.

Timeline: Pilot FY26 (100K farmers); scale FY27-FY30.

4.5 Strategy 5: Blockchain Traceability for Exports

Concept: Launch blockchain-native traceability module for premium export supply chains (coffee, spices, cotton, tea, nuts).

Revenue Model: \$0.50-1.50 per carton or 0.5-1.0% of export value.

Numerical Assumptions:

- Target 1,000 exporters by FY30F
- Average transaction value: \$2M per exporter

- Total GMV: \$2B
- 0.75% take-rate = \$15M revenue

Justification: EU Deforestation Regulation (EUDR) and US organic equivalence require immutable traceability. Premium exporters willing to pay for compliance certainty.

Timeline: Dedicated platform FY27; onboard 200+ exporters by FY28.

4.6 Strategy 6: Data Monetization - Market Intelligence Platform

Concept: Sell anonymized aggregated data on crop yields, planting patterns, and weather impact to commodity traders, governments, and research institutions.

Revenue Model: Subscription-based data access or project-based insights.

Numerical Assumptions:

- 50 enterprise customers at \$0.5M/year = \$25M revenue
- 80%+ margins

Justification: CropIn has proprietary data on 4.2M+ farmers across 15 countries. No competitor has comparable ground-truth validated dataset.

Timeline: Data warehouse and analytics team; launch FY27.

4.7 Strategy 7: Input Recommendation Engine

Concept: Use yield gap analysis to recommend specific seeds, fertilizers, and crop protection products to close predicted yield gaps.

Revenue Model: 2-5% commission on input sales (partner with input marketplaces).

Numerical Assumptions:

- 30% of farmers (3.75M) using recommendations
- Average input spend per farmer: \$200
- Total GMV: \$750M
- 3% take-rate = \$22.5M revenue

Justification: Natural adjacency to CropIn's core intelligence. Partners (Bijak, DeHaat) handle fulfillment.

Timeline: Partner with 3-5 marketplaces; launch FY27.

4.8 Strategy 8: Parametric Insurance Distribution

Concept: Move beyond underwriting to direct distribution of parametric insurance products to farmers via CropIn's app.

Revenue Model: 10-15% commission (insurer's distribution fee).

Numerical Assumptions:

- 2M farmers enrolled by FY30F

- Average premium: \$25/year
- Total premium: \$50M
- 12% commission = \$6M revenue

Justification: Farmers trust CropIn's weather intelligence. CropIn can offer better pricing (lower claims assessment costs) than traditional channels.

Timeline: Partner with AIC, ICICI Lombard; launch FY28.

4.9 Strategy 9: API-as-a-Service for Developers

Concept: Open CropIn's intelligence APIs to third-party developers (agri-apps, FPO software, banks) on a pay-per-call or subscription basis.

Revenue Model: \$0.01-0.10 per API call; enterprise subscriptions.

Numerical Assumptions:

- 500 developer partners by FY30F
- Average monthly API revenue: \$5,000/partner
- **Total: \$30M revenue (70%+ margins)**

Justification: CropIn's API-first architecture makes this low-cost to implement. Creates ecosystem lock-in.

Timeline: Developer portal and sandbox; launch FY27.

4.10 Strategy 10: Government and Development Sector Contracts

Concept: Secure large-scale government contracts for subsidy targeting, crop estimation, and climate resilience programs.

Revenue Model: Project-based or per-hectare contracts.

Numerical Assumptions:

- 5 large government contracts (India + African countries)
- Average contract value: \$3M/year
- **Total: \$15M revenue**

Justification: Governments need farm-level data for policy. CropIn has proven capability (pilots with NABARD, World Bank).

Timeline: Dedicated government relations team; pursue RFPs FY27 onward.

Table 4: Revenue Expansion Summary - Full Playbook Implementation (\$M)

Line Item	FY25A	FY26F	FY27F	FY28F	FY29F	FY30F	Margin
Core SaaS (per-hectare)	38	48	60	72	84	95	70%
+ Premium Tier Upsell	—	2	5	8	12	15	75%
+ NBFC Credit	—	—	5	20	45	75	60%
+ Farmer App	—	1	5	12	25	40	70%
+ Carbon Verification	—	1	3	7	12	18	80%
+ Blockchain Traceability	—	—	2	6	10	15	75%
+ Data Monetization	—	1	3	8	15	25	85%
+ Input Recommendations	—	—	2	6	12	22	60%
+ Parametric Insurance	—	—	—	1	3	6	65%
+ API-as-a-Service	—	—	2	8	18	30	75%
+ Government Contracts	—	1	3	6	10	15	55%
Total Revenue	38	54	90	154	246	356	70%+
Growth (%)	—	42%	67%	71%	60%	45%	—

Note: Realistic aggressive target for FY30F is \$250M, reflecting execution on select strategies at conservative penetration rates. Full \$356M represents long-term potential beyond FY30.

Table 5: Profit & Loss Statement - Base Case (\$M)

Line Item	FY25A	FY26F	FY27F	FY28F	FY29F	FY30F
Revenue	38.0	48.0	60.0	72.0	84.0	95.0
Cost of Revenue (Cloud, Data)	12.2	14.4	17.4	20.2	22.7	24.7
Gross Profit	25.8	33.6	42.6	51.8	61.3	70.3
Gross Margin (%)	68.0%	70.0%	71.0%	72.0%	73.0%	74.0%
Sales & Marketing	5.7	6.7	8.4	10.1	11.8	13.3
Research & Development	7.6	9.6	12.0	14.4	16.8	19.0
General & Administrative	3.8	4.8	6.0	7.2	8.4	9.5
Total OPEX	17.1	21.1	26.4	31.7	37.0	41.8
EBITDA	8.7	12.5	16.2	20.1	24.3	28.5
EBITDA Margin (%)	15.0%	18.0%	20.0%	22.0%	24.0%	26.0%
Depreciation & Amortization	1.5	1.8	2.1	2.4	2.7	3.0
EBIT	7.2	10.7	14.1	17.7	21.6	25.5
Tax (25%)	1.8	2.7	3.5	4.4	5.4	6.4
Net Profit	5.4	8.0	10.6	13.3	16.2	19.1
Net Margin (%)	14.2%	16.7%	17.7%	18.5%	19.3%	20.1%

4.11 Revenue Expansion Summary Table with Margin Profiles

5 Financial Analysis - Detailed Forecasts with Justifications

5.1 Profit & Loss Statement Forecast (Base Case)

5.2 Aggressive Revenue Expansion Scenario (Bull Case with Playbook)

5.3 Balance Sheet Forecast (Base Case)

5.4 Cash Flow Statement Forecast (Base Case)

6 Key Financial Ratios & DuPont Analysis

6.1 DuPont Analysis

$$\text{ROE} = \frac{\text{Net Profit}}{\text{Revenue}} \times \frac{\text{Revenue}}{\text{Assets}} \times \frac{\text{Assets}}{\text{Equity}} = \text{Net Margin} \times \text{Asset Turnover} \times \text{Leverage}$$

For FY30F (Base Case): $20.1\% \times 0.48 \times 1.52 = 14.7\%$ ROE

7 Scenario Analysis & Sensitivity with Detailed Drivers

7.1 Three Scenario Summary with Driver Assumptions

7.2 Sensitivity Analysis Matrix

8 Valuation Framework

8.1 DCF Valuation (Base Case)

8.2 Relative Valuation - Comparable Company Analysis

Relative valuation conclusion: CropIn trades at a discount to pure-play analytics peers (Descartes 6.0x, Gro 5.0x) due to (a) private company status, (b) emerging market focus, (c) early-stage profitability. As CropIn scales and achieves higher ARPU (\$10+), multiple expansion to 4.0-5.0x EV/Revenue is reasonable (25-50% upside). In the Aggressive Playbook scenario (\$250M revenue, 25% EBITDA margin), at 4.0x EV/Revenue, equity value could reach \$1,000M (3x+ upside from current).

9 Conclusion and Recommendation

9.1 Investment Recommendation

Investment Recommendation: BUY with Base Case target of \$31.70 per share (58% upside from assumed current price of \$20.00).

Table 6: Aggressive Revenue Scenario - Full Playbook Implementation (\$M)

Line Item	FY25A	FY26F	FY27F	FY28F	FY29F	FY30F
Core Business	38	48	60	72	84	95
+ Premium Tier Upsell	—	2	5	8	12	15

Table 10: Scenario Analysis - FY30F Outcomes

Scenario	Bear	Base	Bull	Aggressive
Revenue (\$M)	75	95	125	250
EBITDA Margin (%)	18.0%	26.0%	28.0%	25.0%
Net Margin (%)	13.0%	20.1%	22.0%	18.0%
ROE (%)	9.0%	14.7%	18.0%	22.0%
Farmers Covered (M)	8.5	12.5	14.0	15.0
Revenue per Farmer (\$)	8.80	7.60	8.90	16.70
Take-rate/ARPU	Low cross-sell	Steady growth	High cross-sell	Full playbook

Assumptions: Bear: Slow adoption, limited new geographies, enterprise client loss; Base: Steady growth, 5 new countries, steady ARPU improvement; Bull: Fast adoption, 10 new countries, successful credit & carbon rollout; Aggressive: Full playbook execution, higher ARPU from premium services.

Table 11: Sensitivity Analysis: Impact of Key Drivers on Valuation (\$M)

Change in Driver	-10%	-5%	0%	+5%	+10%
Revenue Growth	250	275	300	325	350
Gross Margin	270	285	300	315	330
WACC	340	320	300	280	260
Terminal Growth	280	290	300	310	320

Table 12: DCF Assumptions with Justifications

Assumption	Value	Justification
Risk-free rate	7.0%	Indian 10-year government bond yield
Market risk premium	6.0%	Standard for Indian equity markets
Beta (levered)	1.15	Lower than full-stack peers due to SaaS model
Cost of Equity (CAPM)	13.9%	$7.0\% + 1.15 \times 6.0\%$
Cost of Debt	11.0%	Prevailing rates for unlisted Indian companies
Debt/Equity	5/95	Conservative capital structure
WACC	13.3%	$(0.95 \times 13.9\%) + (0.05 \times 11.0\% \times 0.75)$
Terminal Growth Rate	4.0%	Long-term India nominal GDP growth

Table 13: Free Cash Flow to Firm (FCFF) Projection - Base Case (\$M)

Item	FY26F	FY27F	FY28F	FY29F	FY30F	FY31F
EBIT	10.7	14.1	17.7	21.6	25.5	28.1
Tax (25%)	(2.7)	(3.5)	(4.4)	(5.4)	(6.4)	(7.0)
NOPAT	8.0	10.6	13.3	16.2	19.1	21.1
D&A	1.8	2.1	2.4	2.7	3.0	3.3
CAPEX	(2.2)	(2.4)	(2.6)	(2.8)	(3.0)	(3.3)
Change in NWC	(2.5)	(3.0)	(3.5)	(4.0)	(4.5)	(5.0)
FCFF	5.1	7.3	9.6	12.1	14.6	16.1

Table 14: DCF Valuation Summary - Base Case

Component	Value (\$M)	Notes
PV of FCFF (FY26-FY30)	\$45	Sum of discounted FCFF
PV of Terminal Value	\$255	Terminal FCFF $\times (1+g)/(WACC-g)$ discounted
Enterprise Value	\$300	PV of FCFF + PV of Terminal
Net Debt	(\$17)	Cash \$22M - Debt \$5M (net cash)
Equity Value	\$317	Enterprise Value + Net Cash
Shares Outstanding	10.0 M	Assumed based on last fundraising
Price per Share	\$31.70	Equity Value / Shares
Assumed current price	\$20.00	Estimated based on last round valuation
Upside	58.5%	$(31.70/20.00 - 1)$

Table 15: Comparable Company Analysis

Company	Market	EV/Revenue (FY25F)	Notes
DeHaat (private)	India	3.5x	Full-stack agri-tech
Bijak (private)	India	2.5x	B2B marketplace
SatSure (private)	India	4.0x	Satellite analytics
Descartes Labs (private)	US	6.0x	AI analytics
Gro Intelligence (private)	US/Kenya	5.0x	Agri-intelligence
Median	—	4.0x	Excluding outliers
CropIn (Base FY30F)	India	3.2x	SaaS intelligence
CropIn (Aggressive FY30F)	India	1.4x	Full playbook execution

- **Bull Case (Organic Growth):** Faster digitization, successful Africa expansion, and higher ARPU growth could drive revenue to \$125M by FY30F, with valuation upside to \$45+ per share (125% upside)
- **Aggressive Playbook Case:** Full execution of the 10-strategy playbook (NBFC credit, carbon verification, farmer app, blockchain traceability, data monetization) could drive revenue to \$250M by FY30F. At 4.0x EV/Revenue, equity value could reach \$1,000M (5x+ upside from current)

9.2 Key Catalysts to Monitor

10 Risk Analysis and Mitigation with Probability Scoring

10.1 Final Investment Thesis Summary

CropIn offers a rare combination of:

1. **Superior unit economics:** LTV:CAC 18-39:1, payback period 3-5 months, asset-light model with no inventory risk
2. **Negative working capital model:** Cash conversion cycle of negative 45 days improving to negative 70 days by FY30F
3. **Large and growing TAM:** \$45.5B global agricultural intelligence market growing at 16% CAGR
4. **Already profitable and FCF positive:** EBITDA positive since FY22, FCF positive \$6.9M in FY25A
5. **Multiple expansion levers:** 10 strategies can drive 3-7x revenue growth with path to \$250M+
6. **Defensible moat:** SmartRisk flywheel creates network effects; proprietary ground-truth dataset is irreplaceable

We recommend BUY with a Base Case target of \$31.70 per share.

Disclosures: The authors do not hold positions in CropIn. All assumptions are based on publicly available information, industry research, and logical extrapolation. Actual results may differ materially from forecasts.

Table 16: Key Catalysts and Expected Impact

Catalyst	Timeline	Expected Impact
NBFC license announcement	FY26 Q3-Q4	20-30% re-rating
Carbon credit verification launch	FY26 Q2-Q3	15-20% re-rating
Farmer app 1M users	FY27 Q2	10-15% revenue uplift
Blockchain traceability launch	FY27 Q1-Q2	10-15% multiple expansion
Africa expansion (5 countries)	FY27-FY28	25-30% TAM increase
EBITDA margin 25%+	FY28-FY29	50%+ re-rating to profitability multiple

Table 17: Key Risks & Mitigation Strategies

Risk	Prob	Impact	Mitigation
Competition (full-stack platforms)	65%	High	Data moat (4.2M farmers); switching costs
Regulatory (NBFC licensing)	40%	High	Compliance team; partner with law firms
Enterprise concentration risk	55%	Medium	Diversify to 250+ clients; long-tail focus
NBFC credit default	25%	High	Farm scores for underwriting; small tickets
Satellite data dependency	30%	Medium	Multi-sensor (SAR, optical, thermal)
Climate change model accuracy	35%	Medium	Continuous ML retraining; ground truth
Economic slowdown	20%	Low	Agri-essential; inelastic demand
